

Drainage pipes for IFE Grand Resorts Project

Polypipe International supplied the IFE Grand Resort in Lagos, Nigeria with **Ridgidrain drainage pipes**. The innovative stormwater design was installed to allow the construction of several causeway access roads into the resort.

Polypipe's Ridgidrain is used for non-pressurised surface and sub-surface drainage applications. With a high strength to weight ratio, the system is flexible enough to resist high traffic loads with a design life in excess of 60 years. The structured wall design of the pipes is made from 100% recycled, high strength HDPE, which also gives it a high resistance to most common corrosive chemicals.
